

PROJECT 2 - DECISION TREES

R.R. KOOPMANS, 15043143

April 29, 2017

1 How to Run the Project

The program is written in Python (version 3), and no compilation is required. To run the program, use the following calling convention:

```
./DecisionTree <options> <spec> <data>
```

If you receive a permissions error, you can run the following command to give the file executable permissions on your file system:

```
chmod 777 DecisionTree
```

Or alternatively run the program by calling:

```
python3 DecisionTree <options> <spec> <data>
```

Additionally, calling the program with the `-h` flag will print a help page on the flags supported.

2 Summary of Implemented Work

- All flags are supported (d, md, pd, c, mc, pc).
